

# MIB Browser Version 8.0 User Guide

The iReasoning MIB browser is a powerful and easy-to-use tool powered by iReasoning [SNMP API](#). MIB browser is an indispensable tool for engineers to manage SNMP enabled network devices and applications. The iReasoning MIB browser allows users to load standard, proprietary MIBs, and even some mal-formed MIBs. It also allows them to issue SNMP requests to retrieve SNMP agents' data, or make changes to agents. A built-in trap receiver can receive SNMP traps and handle trap storm.

## Major features:

- Intuitive GUI
- Complete SNMPv1, v2c and v3 (USM and VACM) support
- Complete SNMPv3 USM support, including HMAC-MD5, HMAC-SHA, CBC-DES, [CFB128-AES-128](#), CFB128-AES-192, CFB128-AES-256 algorithms
- Robust and powerful SMIV1/SMIV2 MIB parser
- IPv6 support
- Trap Receiver
- Trap Sender
- Log window to display application log and SNMP packets exchanged between browser and agents
- Table view for MIB tables
- SNMPv3 USM user management
- Port view for network interface cards
- Switch port mapper for mapping switch ports
- Performance graph tool for monitoring of numerical OID values
- Device snapshot
- Cisco device snapshot
- Ping and traceroute tools
- Network discovery tool
- SNMP Agents Comparison
- Bookmarks
- Runs on Windows, Mac OS X, Linux and other UNIX platforms

## Requirements

- Windows, Mac OS X, Linux and other UNIX platforms.
- If on Linux/UNIX, the SUN JRE 1.5 or a later version must be installed and *java* command must be in the system path.

## Download and Run MIB Browser

1. Download [MIB browser installer or zip file](#). On Windows, run setup.exe to install MIB browser. On Mac OS X, Linux and other UNIX platforms, unzip it to the desired directory.

2. Run MIB Browser:

- On **Windows**, click on the MIB browser icon to start browser.
- On **Linux/UNIX**, enter MIB browser home directory and run ***browser.sh*** to start browser.
- On **Mac OS X**, enter ireasoning/mibbrowser directory and double click on the ***browser or browser.command*** icons to start MIB browser.

On Linux/UNIX/MAC OS X, if you login as a non-root user and need to run trap receiver at UDP port 162, start MIB browser using the following command:

```
sudo browser.sh
```

## Enterprise Edition

Trap receiver and watches functions run as a system service. Watches function supports action, which means you can configure actions (sending email) when a MIB object's value violates a pre-configured threshold.

On Windows platform, the service starts up automatically. On Linux/MAC OS X, you need to configure system to execute *\$INSTALL\_DIR/lib/runserver.sh* on startup.

# The Browser GUI

## ✧ Menu

### ■ File menu

#### ▪ Load MIB

Launch a file dialog for picking one or multiple MIB files. You need to hold CTRL key if you want to select multiple files.

#### ▪ MIB Modules

List properties of all loaded MIB modules.

#### ▪ Server Address (Enterprise Edition Only)

By default, MIB browser connects to a local server to get trap and watches data. However, you can change the server address so that it can get the data from somewhere else.

- **Open Session**

Open a previously saved session file.

- **Open Graph Data**

Open a previously saved graph data file.

- **Save Session**

Save current settings of open tabs to a session file, which can be opened later to restore tabs.

- **Exit**

Exit browser.

- **Edit menu**

- Find in MIB Tree

Find a node in the MIB tree.

- Find in Result Table

Find a string in the result table.

- **Operations menu**

- **Get**

Issue SNMP GET request against current agent.

- **Get Next**

Issue SNMP GET-NEXT request against current agent.

- **Get Bulk**

Issue SNMPv2c or SNMPv3 GET-BULK request against current agent. If the SNMP agent only supports SNMPv1, then this command will time out.

- **Set**

Issue SNMP SET request against current agent.

The following window will show up:

Enter a new value in the “*Value*” field then click “Ok” button.

To set multiple variables, you can hold CTRL key and select multiple rows in the result pane, then choose SET operation.

Note:

1. For *BITS* data type, you need to use mathematical notation for a set of integers, that is, something like  $\{1, 3, 8\}$ .
2. The format for hexadecimal string is (0x[0-9A-Fa-f][0-9A-Fa-f] )+. For instance, 0x12 0xA1 0x30

- **Get Subtree**

Issue SNMP GET-NEXT requests to get the whole subtree against current agent.

- **Walk**

Do SNMP walk against current agent.

- **Table View**

Show MIB table data.

Result Table		server - ifTable x
 Rotate  Refresh  Export         Poll         SNMP SET		
	1	2
ifIndex	1	16777219
ifDescr	MS TCP Loopback...	VIA Rhine II Fast ...
ifType	softwareLoopback	ethernetCsmacd
ifMtu	1500	1500
ifSpeed	10000000	100000000
ifPhysAddress		00-16-EC-6E-D7-CA
ifAdminStatus	up	up
ifOperStatus	up	up
ifLastChange	0 millisecond	0 millisecond
ifInOctets	7259756	273027256
ifInUcastPkts	37065	252508
ifInNUcastPkts	0	286707
ifInDiscards	0	0
ifInErrors	0	0
ifInUnknownProtos	0	317
ifOutOctets	7259756	26903284
ifOutUcastPkts	37065	176062
ifOutNUcastPkts	0	631
ifOutDiscards	0	0
ifOutErrors	0	0
ifOutQLen	0	0
ifSpecific	.0.0	.0.0

Clicking on this menu item will bring up a new table view window. But first, [OID field](#) needs to be an OID of a table or entry nodes. For example, it can be *ifTable*, *ifEntry* etc.

You can press CTRL key and select multiple tabular variables of the same table, then click “Table View”. In this way, table view only shows the tabular variables you selected rather than the whole table.

Buttons on the toolbar of table view window:

<b>Rotate button</b>	Rotate table 90 degrees.
<b>Refresh button</b>	Refresh table now.
<b>Export</b>	Export table data to a CSV file.
<b>Poll button</b>	Refresh table periodically.

<b>SNMP SET</b>	Perform SNMP SET for selected table cells.
<b>Create Row</b>	Dynamically create a row. The table must support dynamic row creation, that is, it has a RowStatus or EntryStatus column.
<b>Delete Row</b>	Dynamically delete the selected row. The table must support dynamic row creation, that is, it has a RowStatus or EntryStatus column.

## ▪ Graph

Plot graph for selected OID. If there is already one graph tab, you will be asked to re-use this tab or open a new tab.

Clicking on this menu item will bring up performance graph window. But first, [OID field](#) needs to be a numerical OID value or a table column node whose instances are numerical values. For example, it can be *sysUpTime*, *ifOutOctets*, and *ifOutOctets.1*, etc.

Buttons on the toolbar:

<b>Export to CSV file</b>	Export chart data to a CSV file.
<b>Import from CSV file</b>	Import data from a CSV file.
<b>Save as PNG</b>	Save chart data to a PNG format file.
<b>Print</b>	Print out the chart.
<b>Restart</b>	Restart plotting chart.
<b>Pause</b>	Pause plotting chart.
<b>Switch</b>	Switch between current view and global view.
<b>Display trace</b>	Display trace lines.

<b>Grid</b>	Display grid lines.
<b>Rate</b>	Display delta instead of raw values.

The polling interval can be changed by clicking the “Set” button.

## ■ Tools menu

### ▪ Trap Sender

Open trap sender window:

**Trap Sender**

IP Address:  Port:

Number of Retries:  Timeout(sec):

**Parameters:**

Type:  Community:

snmpTrapOid:  Specific:

snmpTrapOID's Value:  sysUpTime (sec.):

**Variable Bindings (optional):**

OID/Name	Value	Type
alarmIndex.1	0	Integer
alarmVariable.1	.1.3	OID
alarmSampleType.1	0	Integer
alarmValue.1		OctetString
alarmRisingThreshold.1		OctetString

Add Modify Delete Suffix

**Send Trap**

This window allows user to send out SNMPv1/v2c traps or informs. For SNMPv1/v2 trap nodes in the MIB tree, you can right click on them and select “Send Trap” context menu to bring up this window, and the information from the trap node will be used to fill out the default values.

- **Watches**

Displays a table of variables being watched.

<div>  Refresh           Import           Export           Poll           Show All <span>▼</span> </div>						
	Agent	Name	Value	Type ▲	Opera...	Query Time
1	192.168...	ifInOctets.4	90912...	Count...	Get	2009-11-30 10:47:06
2	server	sysUpTime.0	2 hou...	TimeI...	Get	2009-11-30 10:47:22

*(Professional Edition)*

<div> Import           Export            Chart            Settings           Show All <span>▼</span> </div>						
	Agent	Name	Value	Type	Oper...	Query...
1	hp	ifInOctets.4	909124420	Count...	Get	2009-11...
2	server	sysUpTime mon...	2 hours 14 minutes...	TimeI...	Get	2009-11...

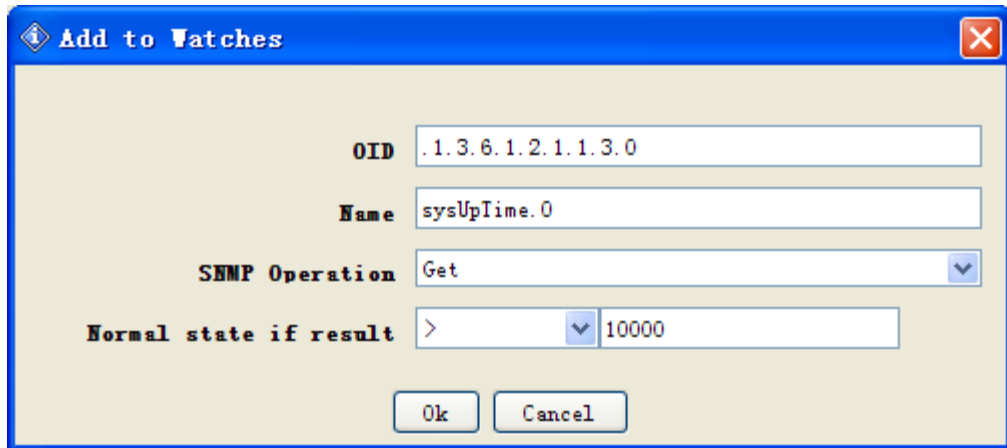

*(Enterprise Edition)*

*(Enterprise Edition. Watch's historical data)*

- **Add Watch**

Add watch item.

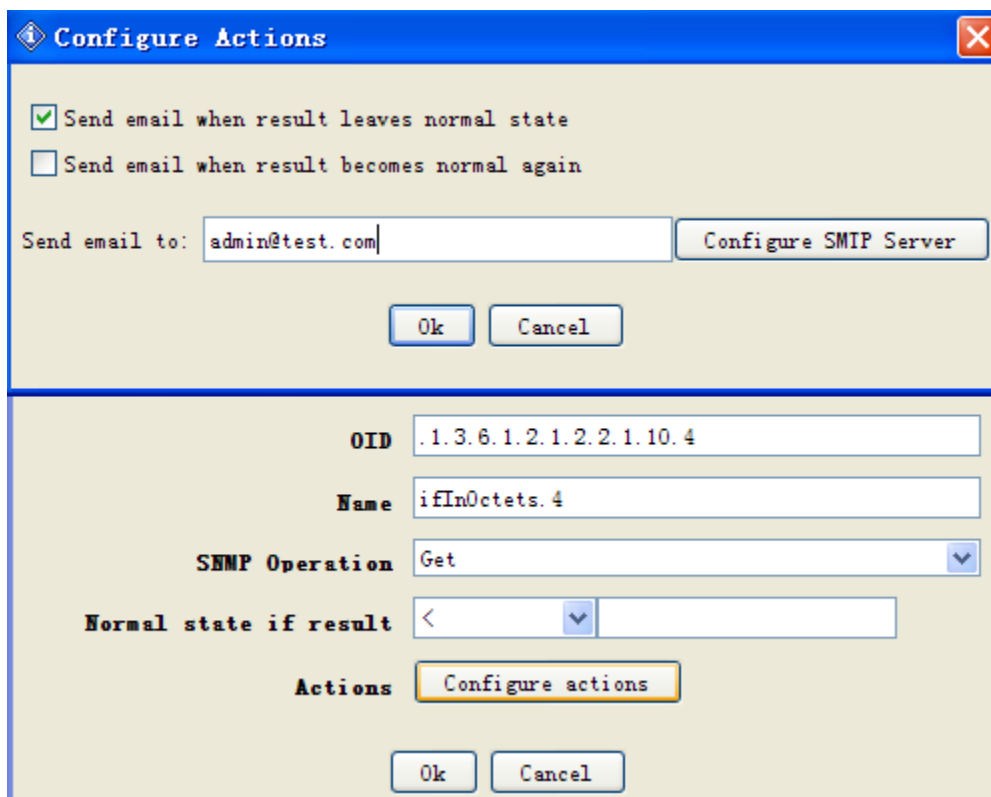

The 'Add to Watches' dialog box is shown with the following fields and values:

- OID:** .1.3.6.1.2.1.1.3.0
- Name:** sysUpTime.0
- SNMP Operation:** Get
- Normal state if result:** > 10000

Buttons: Ok, Cancel

*(Professional Edition)*

The 'Configure Actions' dialog box is shown with the following fields and values:

- ☒ Send email when result leaves normal state
- ☐ Send email when result becomes normal again
- Send email to:** admin@test.com
- Configure SMTP Server** button
- OID:** .1.3.6.1.2.1.2.2.1.10.4
- Name:** ifInOctets.4
- SNMP Operation:** Get
- Normal state if result:** <
- Actions:** Configure actions

Buttons: Ok, Cancel

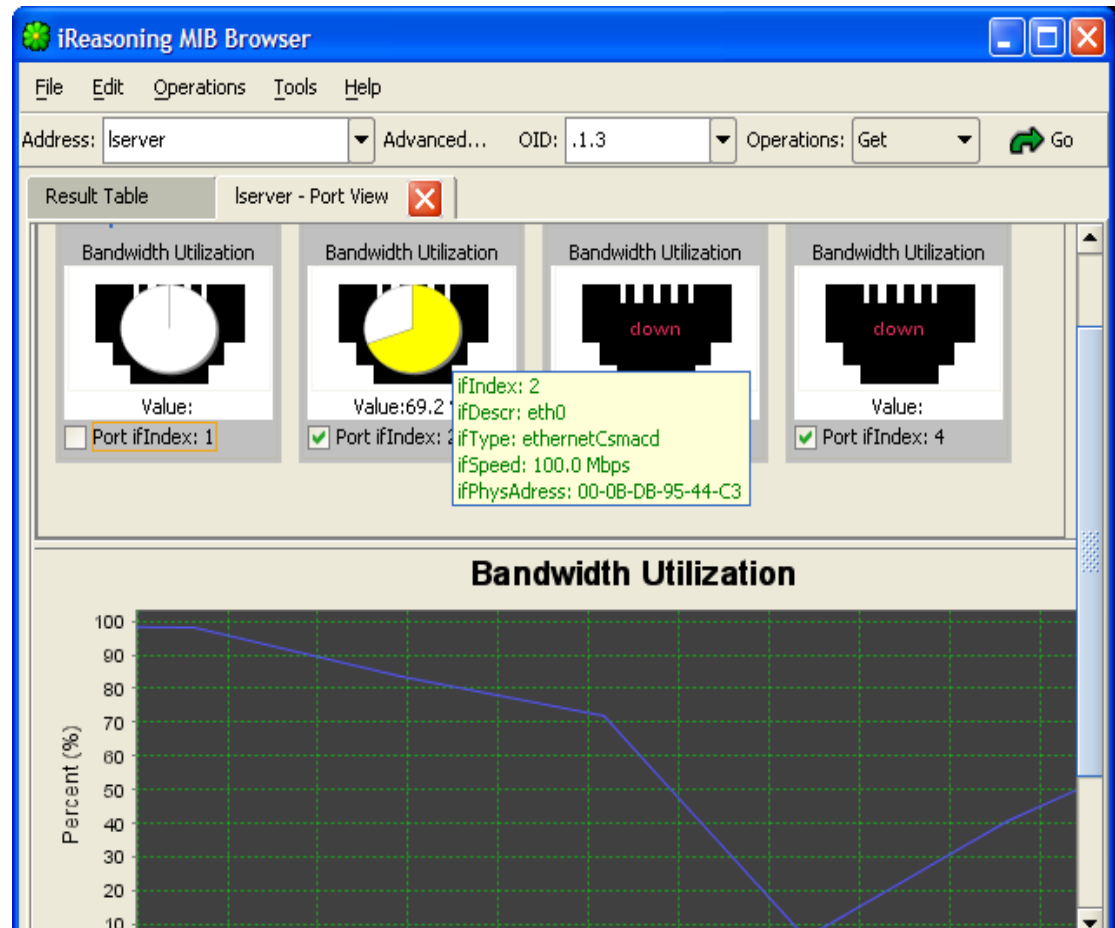

*(Enterprise Edition)*

In enterprise edition, you can configure actions for each watch. Current actions include sending out email when the watch is in alarm or rearm states.

- **Port View**

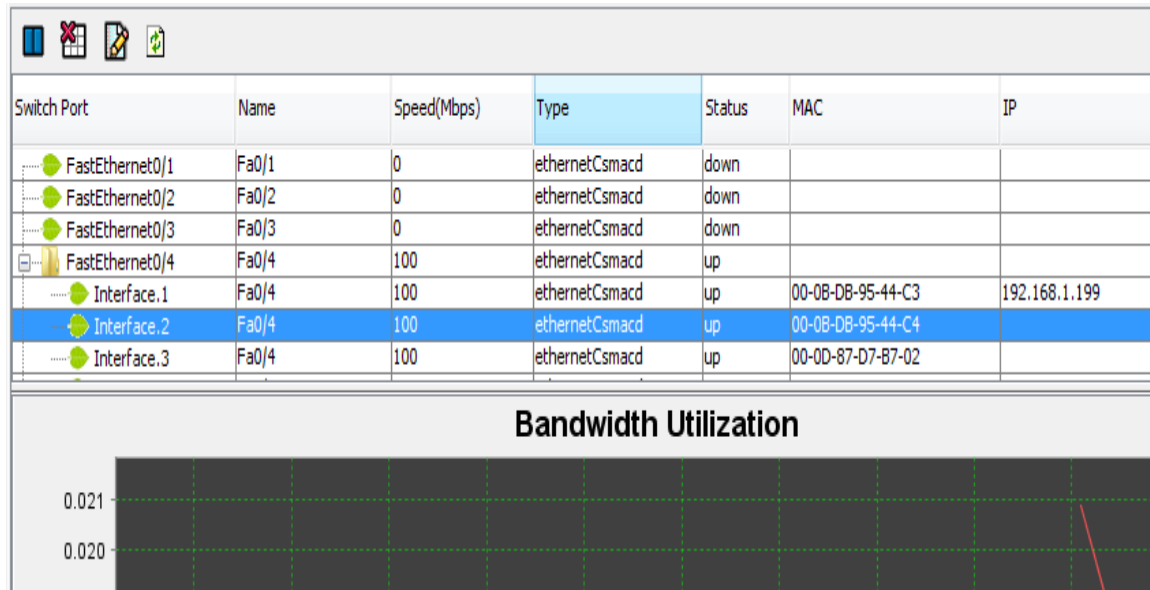

It shows input/output bandwidth utilization and error percentage of all ports of a node. The tooltips of pie charts show port properties. You can uncheck the checkbox near port's name to ignore its values.

The color of pie charts indicates severity levels, and it can be customized on the settings page.

## ▪ Switch Port Mapper

It shows mapping of the devices connected to a managed switch, and similar to the port view, bandwidth utilization of ports is displayed.

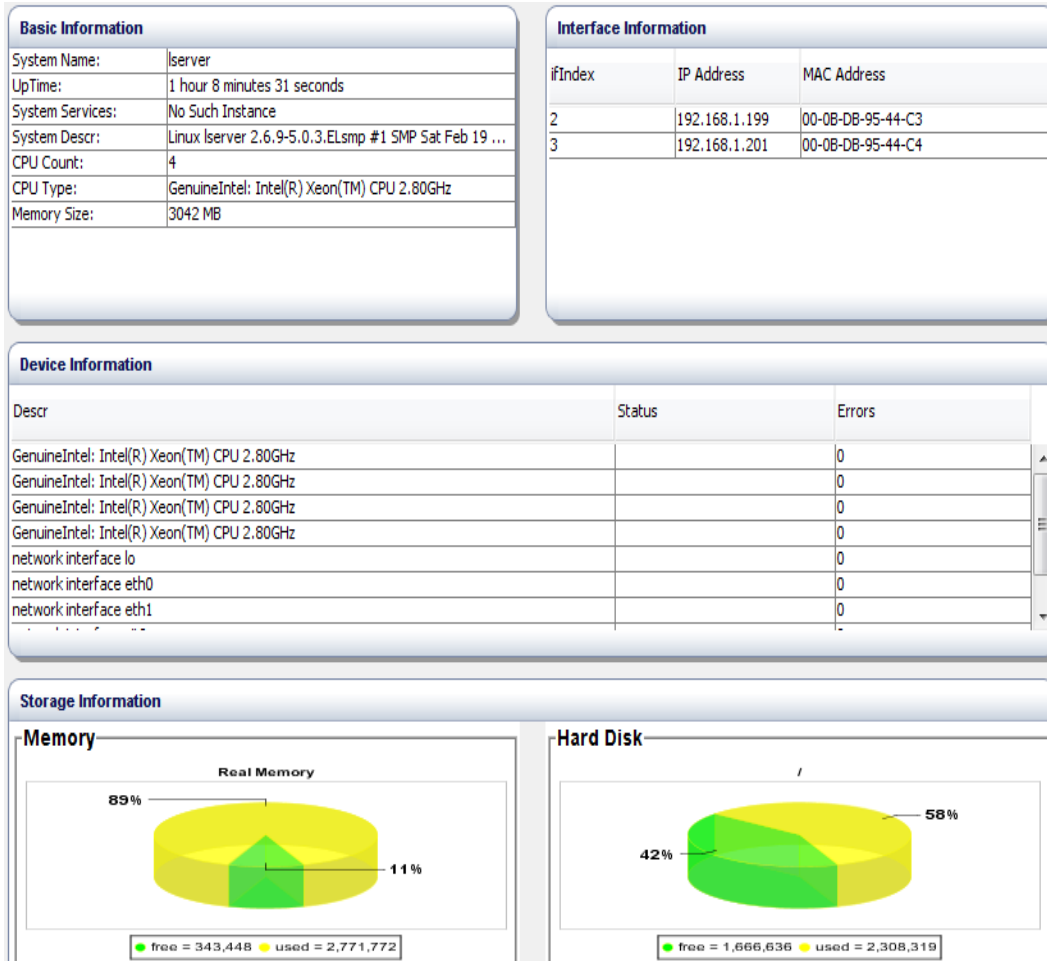

## Configure Settings

- **Routers:** IP and community of layer 3 routers, which will be used to retrieve MAC to IP mapping data.
- **Chart Polling Interval:** Data polling interval for plotting charts.

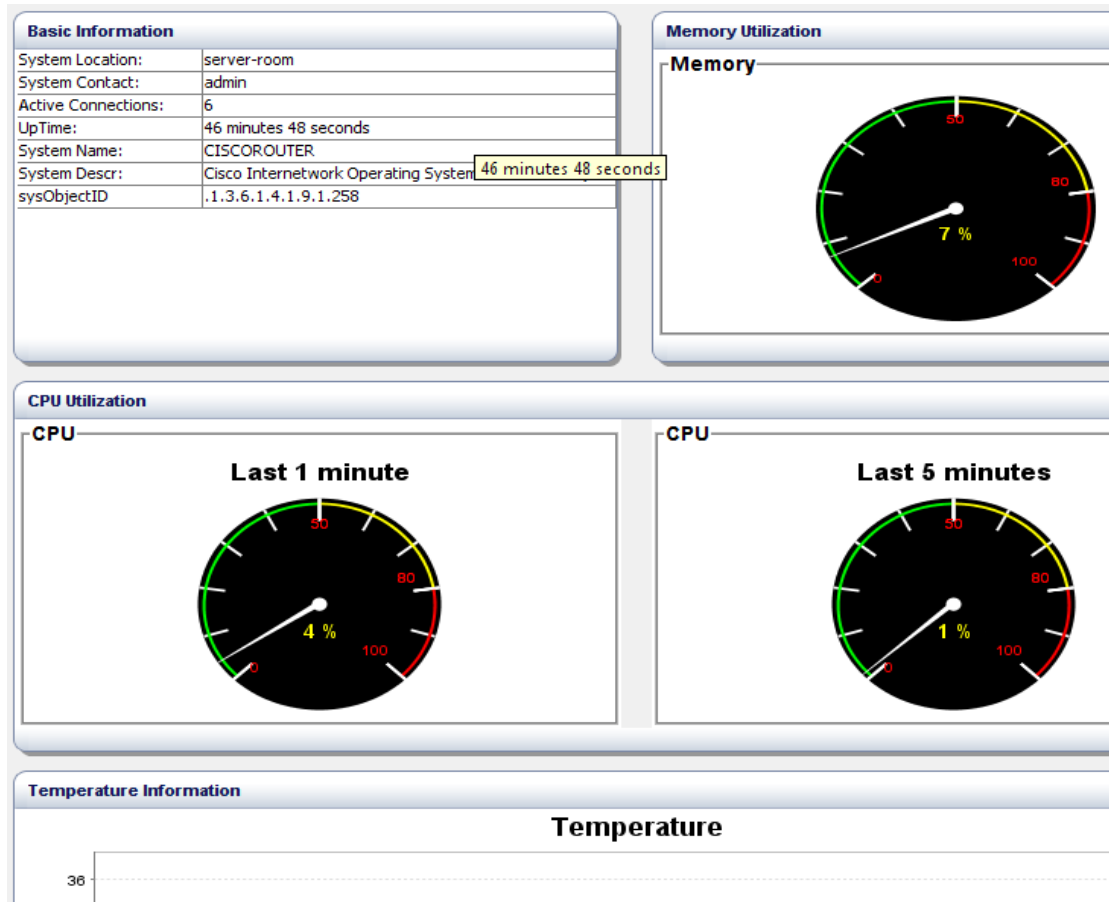

## ▪ Device Snapshot

Show a snapshot view of available device data, including system info, interfaces, disks, processes, installed software, etc.

- **Cisco Device Snapshot**

Show a snapshot view of Cisco devices.

If you have more OIDs to monitor, you can use the settings screen to add additional OIDs. The values of them will be shown in the “Basic Information” panel.

The utilization charts can have two types: meter or pie charts.

- **Log Window**

Open application log window that displays application's log information. To clear the content, right click on this pane and select "Clear text" menu item.

- **Ping**

Open ping tool window:

Enter an IP address and press "Ping" button. The results will be displayed in the text area.

- **Trace Route**

Open traceroute tool window:

Enter an IP address and press "Trace Route" button. The results will be displayed in the text area.

- **Network Discovery**

Open LAN discovery tool window:

Enter a subnet IP address such as 192.168.1.0 and then press “Start” button. It can discover all hosts in the subnet. And if SNMP agent is running on a host, its system table will be queried as well.

- **Manage SNMPv3 USM Users**

	Clone	Enable	Password	Disable	Delete	 Refresh
	User Name	Auth Protocol	Priv Protocol	Storage	Status	
1	fomike	HMAC-MD5	DES	nonVolatile (3)	active (1)	
2	ludwig	HMAC-SHA-1	DES	nonVolatile (3)	active (1)	
3	user88	HMAC-SHA-1	DES	nonVolatile (3)	active (1)	
4	user99	HMAC-MD5	DES	nonVolatile (3)	active (1)	
5	initial	HMAC-MD5	DES	nonVolatile (3)	active (1)	

The initial window displays a list of existing SNMPv3 users. You then can edit user’s properties or delete it.

- **Compare Devices**

Compare the SNMP values of two devices:

A screenshot of a 'Compare Devices' dialog box. It has a blue title bar with a close button. The dialog contains two sections for device configuration. The first section is for 'Device 1' with a text field for 'Address 1' containing '192.168.1.199' and a dropdown arrow, followed by an 'Advanced...' button. The second section is for 'Device 2' with a text field for 'Address 2' containing '192.168.1.197' and a dropdown arrow, followed by an 'Advanced...' button. Below these, there is a section for 'OID:' with a text field containing '.1.3.6.1.2.1.1' and a dropdown arrow, and an 'Operation:' section with a dropdown menu showing 'Get Subtree'. At the bottom are 'OK' and 'Cancel' buttons.

Compare Devices

Device 1: \_\_\_\_\_

Address 1: 192.168.1.199 ▼ Advanced...

Device 2: \_\_\_\_\_

Address 2: 192.168.1.197 ▼ Advanced...

OID: .1.3.6.1.2.1.1 ▼

Operation: Get Subtree ▼

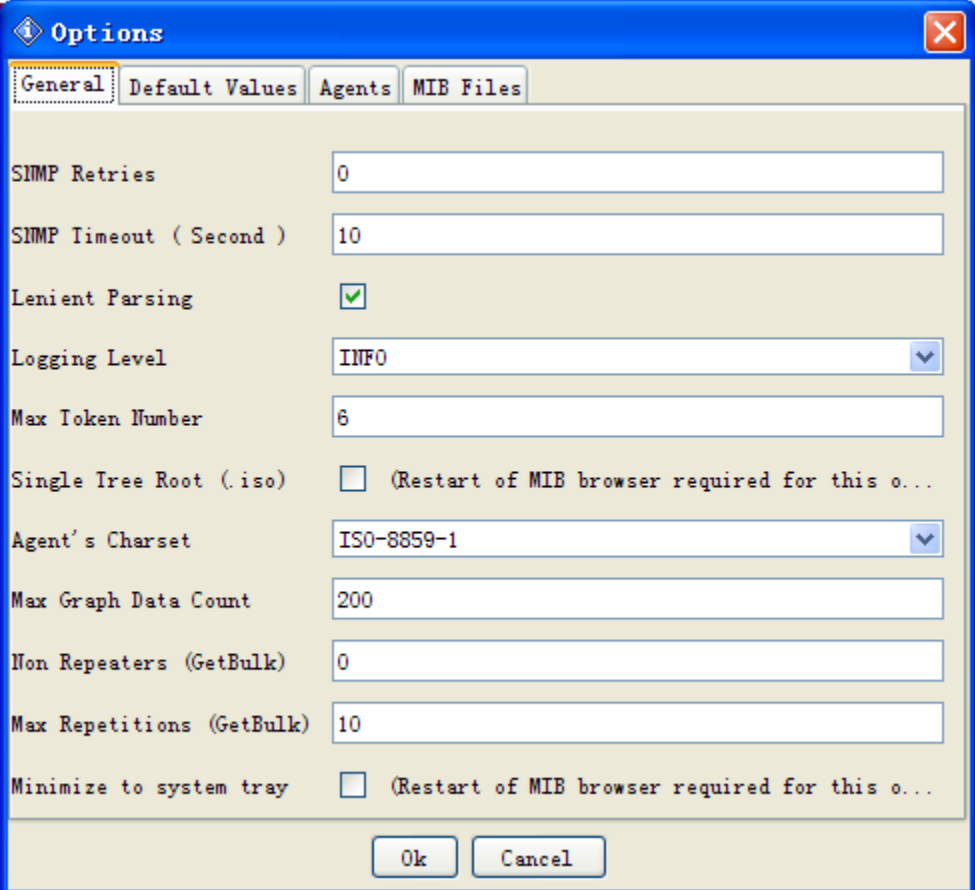

OK Cancel

If the values of them are different, the font color is changed to blue:

Name/OID	Value ( 192.168.1.199 )	Value ( 192.168.1.197 )
sysDescr.0	Linux lserver 2.6.9-5.0.3.ELs...	Windows XP (Build Number: ...
sysObjectID.0	.1.3.6.1.4.1.8072.3.2.10	.1.3.6.1.4.1.99.1.1.3.11
sysUpTime.0	2936216	2952313

- **Options**

Open options window for customizing MIB browser:

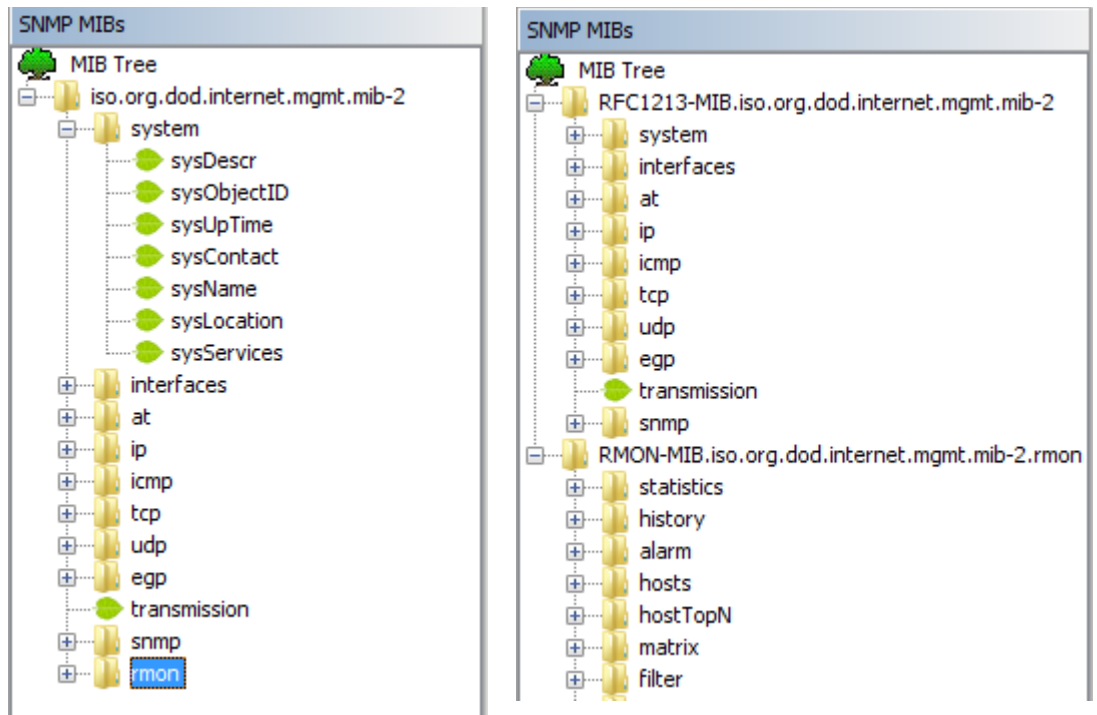

The image shows a Windows-style dialog box titled "Options" with a blue title bar and a close button (X) in the top right corner. The dialog has four tabs: "General" (selected), "Default Values", "Agents", and "MIB Files". The "General" tab contains the following settings:

Setting	Value
SNMP Retries	0
SNMP Timeout ( Second )	10
Lenient Parsing	<input checked="" type="checkbox"/>
Logging Level	INFO
Max Token Number	6
Single Tree Root (.iso)	<input type="checkbox"/> (Restart of MIB browser required for this o...)
Agent's Charset	ISO-8859-1
Max Graph Data Count	200
Non Repeaters (GetBulk)	0
Max Repetitions (GetBulk)	10
Minimize to system tray	<input type="checkbox"/> (Restart of MIB browser required for this o...)

At the bottom of the dialog are two buttons: "Ok" and "Cancel".

- **General tab**

<b>SNMP Retries</b>	Number of retries for SNMP queries.
<b>SNMP Timeout</b>	Timeout value for SNMP queries, in seconds.
<b>Lenient Parsing</b>	If checked, MIB parser will ignores some syntax errors in MIB files.
<b>Logging Level</b>	Logging level of the logger. If it is “DEBUG”, the SNMP PDU will be printed in the Log window, but it may degrade the performance of the MIB browser.
<b>Trap Port</b>	The port number of trap receiver.
<b>Max Token Number</b>	The maximum number of tokens allowed in the description field of trap receiver. For instance, if the value is 6, then the message “.iso.org.dod.internet.mgmt.mib-2.interfaces.ifTable.ifEntry.ifAdminStatus.3” will be truncated to “. . .mib-2.interfaces.ifTable.ifEntry.ifAdminStatus.3”.
<b>Single Tree Root</b>	If checked, MIB tree will have a single root node, that is, the <i>.iso</i> node. Otherwise, each MIB module has its own root node. MIB browser needs to be restarted for this option to take effect.
<b>Agent’s Character Encoding</b>	For an SNMP agent on a non western language OS, it may return values in a different character encoding. You can change the charset in order to correctly display values returned from the agent.
<b>Max Graph Data Count</b>	Maximum number of data in memory of a graph.
<b>Non Repeaters</b>	Non repeaters value for SNMP GET-BULK requests.
<b>Max Repetitions</b>	Max repetitions value for SNMP GET-BULK requests.
<b>Minimize to system tray</b>	If checked, the MIB browser will be minimized to the system tray when you close it.

*Single tree root*

*Each Module has its own root node*

- **Default Values tab**

This tab allows the user to set default properties for new SNMP agents.

- **Agent tab**

IP Address	Port	Ve...	Read Community	Write Community	User	Authenticat	Authenticat	Privacy Protocol	Privacy Password
127.0.0.1	161	1				MD5		DES	
3ffe:ffff:100:f101:210:...	161	1				MD5		DES	
192.168.1.199	161	1				MD5		DES	
192.168.1.22	161	1				MD5		DES	
192.168.1.111	991	1				MD5		DES	

Buttons: Add, Delete, Ok, Cancel

This table stores the properties of visited SNMP agents. You can add or delete agents from this table.

For SNMPv1/v2c agents, values of User, Authentication Protocol, Authentication Password, Privacy Protocol and Privacy Password, are ignored. For SNMPv3 agents, values of Read Community and Write Community are ignored.

- **MIB Files tab**

This table stores file names of loaded MIBs. You can add or delete MIBs from this table.

- **Bookmarks menu**

This menu contains all your stored bookmarks. Bookmarks are links to OIDs and their associated operations that you use frequently. By adding an OID to your bookmarks, you can use it by simply clicking its name, instead of having to type it again.

## ✧ Toolbar

### ■ Address field

Enter the IP address and port number of SNMP agent, in the format of “ipAddress@port” or “ipAddress:port” (IPv4 only). The “@port” or “:port” are not necessary if the port number is 161.

**Address Group** is a group of IP addresses, including their port numbers. It starts with “g ” in the address field. Address group makes it much easier to perform SNMP operations against multiple agents. An example:

*192.168.1.1, 192.168.1.2:1611, 192.168.2.1*

Other properties of an SNMP agent, such as community, SNMPv3 parameters, cannot be specified in the group address dialog. To change these properties, you can enter the IP address into the address field, and press “Advanced” button to change other properties. Then the IP address in the group will automatically reflect the changes.

### ■ Advanced button

Customize the properties of current SNMP agent, such as community names, SNMPv3 USM parameters, etc.

For an SNMPv3 agent, its engineID, authKey and privKey properties will be updated after first successful query.

### ■ OID field

Object identifier to be used for SNMP queries. This field is updated when the user selects a node in MIB tree or a row in the result table. You can also type new value directly in this field.

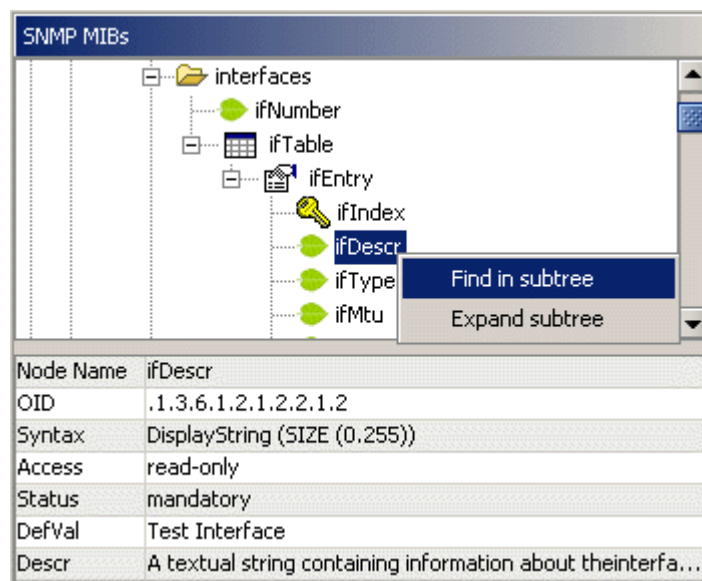

## ■ Operations

Select one of the SNMP operations from the list. Operation will be performed immediately when it is selected.

## ■ Go button

Press this button to perform the selected operation.

## ✧ MIB Tree Pane

It is divided into two panes: Tree pane on the top and properties pane on the bottom.

## ■ Tree Pane

Display MIB trees. Right click on a node, a popup menu shows up. Depending on the node properties, if right clicking on a root node of a MIB module, popup menu includes three menu items: *Find*, *Expand* and *Unload MIB*. On other nodes, their respective popup menus have only two menu items: *Find* and *Expand*.

	Table node
	Table entry node
	Read-write node
	Read-create node
	Index node
	Leaf node, usually read-only

*Table: Icon descriptions*

Double click on a scalar node, its value will be queried against the agent specified on the toolbar. If double click on a tabular node (such as ifSpeed), then its subtree values will be queried against the agent.

## ■ Node Properties Pane

Display properties of selected node. Tooltips of second column show more information.

## ✧ Result Pane

Name/OID	Value	Type	
sysDescr.0	Hardware: x86 Family 15 Model ...	OctetString	
sysObjectID.0	.1.3.6.1.4.1.311.1.1.3.1.3	OID	
sysUpTime.0	2 hours 37 minutes 58 seconds	TimeTicks	
sysContact.0		OctetString	
sysName.0	SERVER	OctetString	
sysLocation.0		OctetString	
sysServices.0	76	Integer	

Display the result of SNMP queries in a table.

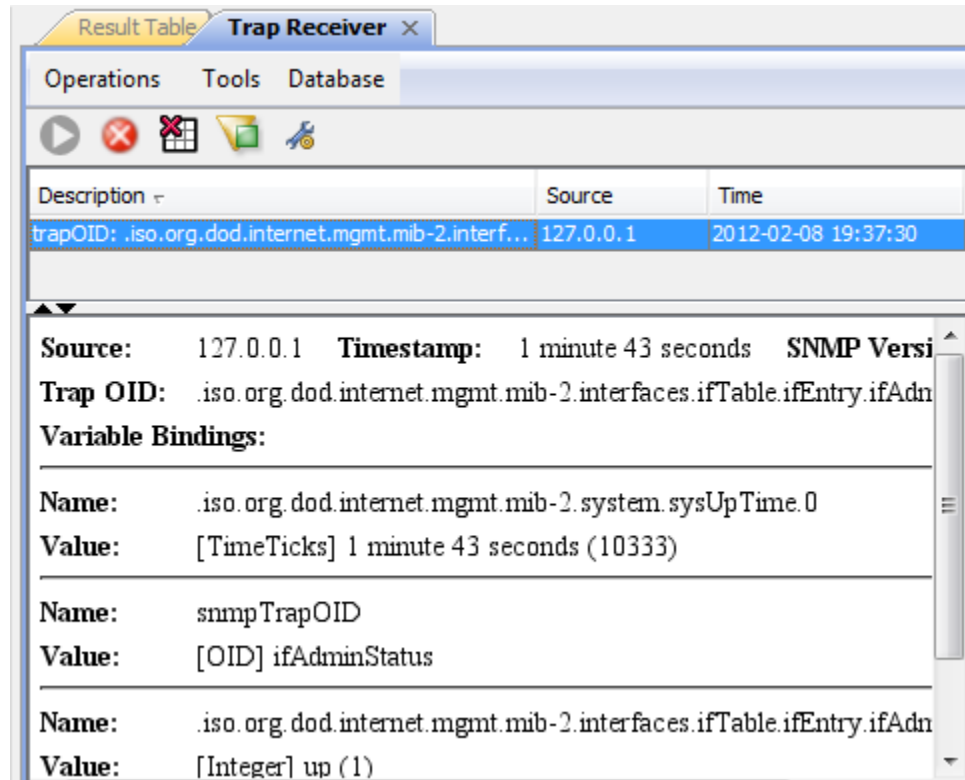

There are three buttons on the right toolbar:

<b>Stop button</b>	Stop pending SNMP queries.
<b>Clear Table button</b>	Clear the result table.
<b>Raw Data button</b>	Launch a new dialog window showing the raw results of SNMP queries.
<b>Find button</b>	Find strings in the result pane.
<b>Save button</b>	Save values in result pane to an XML file.
<b>Open button</b>	Load values from an XML file to the result pane.

# Trap Receiver

## ✧ Main Window

Trap receiver can be opened from MIB browser window or started independently.

Trap receiver window is divided into two panels. The upper panel displays summaries of traps. The lower panel displays details of selected trap.

There are three buttons on the right side toolbar:

<b>Trap Filter button</b>	Apply filter to all received traps. A trap can be blocked based on its IP address and OID.
<b>Start Trap Receiver button</b>	Start the trap receiver. It'll be grayed out if trap receiver is running. Trap receiver is not started automatically when the window is opened.
<b>Stop button</b>	Stop the trap receiver.
<b>Clear Table button</b>	Clear the content of the trap table.
<b>Export Table to CSV</b>	Export table data to a CSV file.
<b>Options</b>	Trap receiver's settings.

## ✧ Options

### ■ General Tab

Trap Receiver Settings

General | SMTP | Email Template | SNMPv3 Trap Receiver

Trap Port: 162

Forward traps to 218.104.133.22 Port 162 Community

☒ Save trap data to database

☒ Show trap message window

☐ Play sound when receiving traps

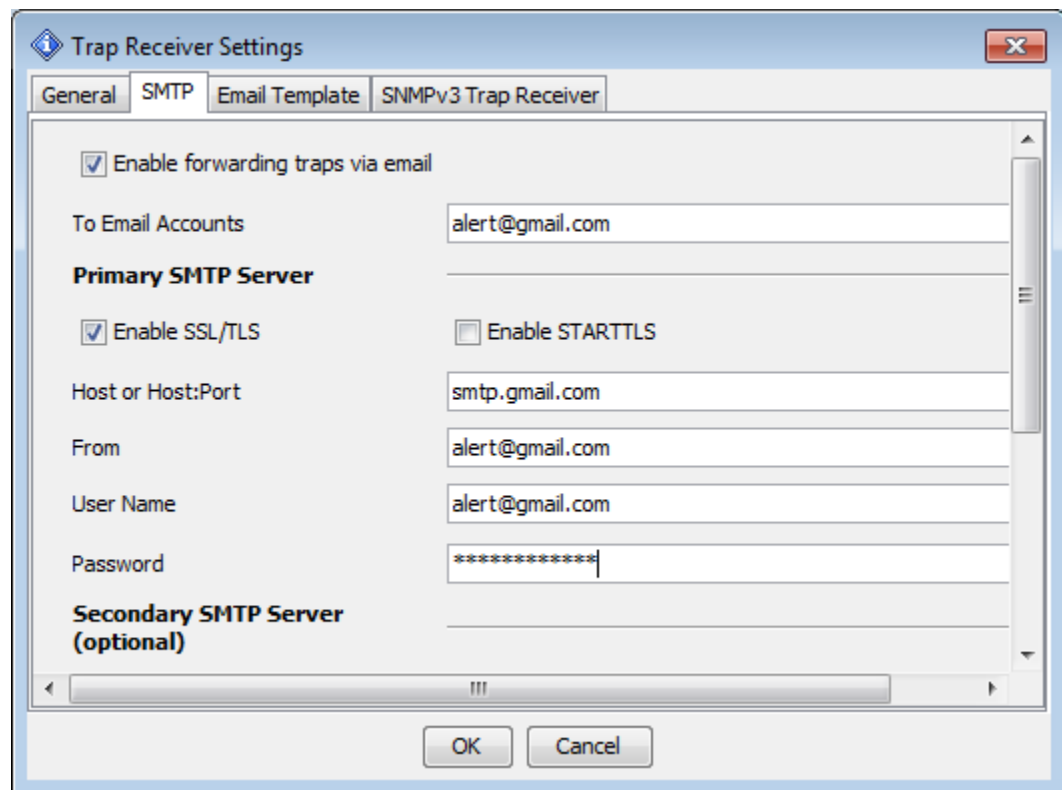

☒ Execute command when receiving traps: sendtext \$oid

OK Cancel

<b>Trap Port</b>	The port number of trap receiver.
<b>Forward Trap To</b>	Forward traps to another trap receiver in SNMPv1 PDUs.
<b>Save trap data to database</b>	If enabled, received traps will be saved to the bundled database. Then they can be loaded again.
<b>Show trap message window</b>	If enabled, a trap message window will show up around system tray when a new trap is received.
<b>Play sound</b>	Play sound when a trap is received.
<b>Execute command</b>	Execute a command when a trap is received.

Tokens used in execute command	
<b>\$ip</b>	IP address of trap originator
<b>\$oid</b>	Trap OID
<b>\$ts</b>	Timestamp value
<b>\$sp</b>	Value of SNMPv1 trap's specific field
<b>\$vb.all</b>	All variable bindings
<b>\$vb.n</b>	The <i>nth</i> variable binding. For example, \$vb.1 is the first variable binding, \$vb.2 is the second one.

- **SMTP Tab**

The image shows a Windows-style dialog box titled "Trap Receiver Settings". It has four tabs: "General", "SMTP", "Email Template", and "SNMPv3 Trap Receiver". The "SMTP" tab is currently selected. Inside the dialog, there is a checkbox labeled "Enable forwarding traps via email" which is checked. Below this, there is a text field for "To Email Accounts" containing "alert@gmail.com". A section titled "Primary SMTP Server" follows, containing two checkboxes: "Enable SSL/TLS" (checked) and "Enable STARTTLS" (unchecked). Below these are text fields for "Host or Host:Port" (smtp.gmail.com), "From" (alert@gmail.com), "User Name" (alert@gmail.com), and "Password" (masked with asterisks). A section titled "Secondary SMTP Server (optional)" is present but empty. At the bottom of the dialog are "OK" and "Cancel" buttons.

This tab specifies whether to enable forwarding SNMP traps via email. If it is enabled, at least the primary SMTP server should be configured. If the secondary SMTP server is also configured, it will be used for sending emails when the primary SMTP server fails.

■ **Email Template Tab** *(only available in enterprise edition)*

**Trap Receiver Settings**

General SMTP **Email Template** SNMPv3 Trap Receiver

☒ Enable Email Template (If enabled, all alarm email notification messages will use this template.)  
(Allowed tokens are: \$ip, \$val, \$oid, \$ts, \$sp, \$ge, \$#, \$vb.all, \$vb.1, \$vb.2, \$vb.3 ...)

**Subject:**  
☐ Use default email subject  
 New trap from \$ip. OID: \$oid

**Body:**  
 Source: \$ip  
 Time: \$ts  
 OID: \$oid  
 Varbinds: \$vb.all

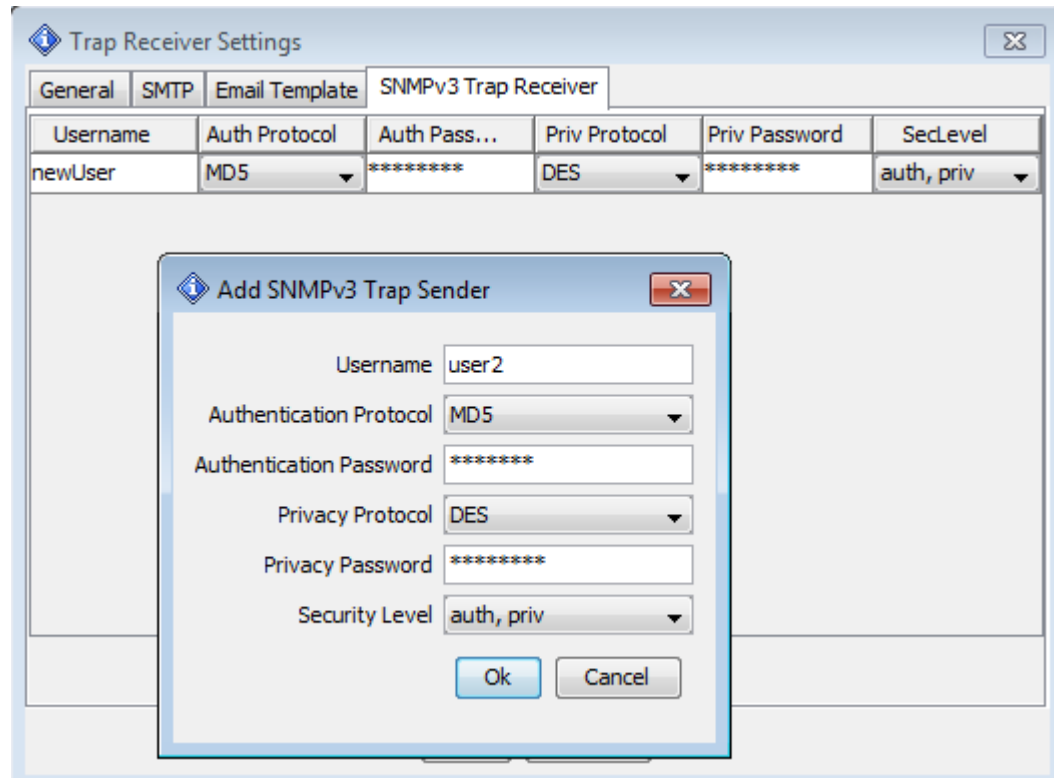

Apply

OK Cancel

If the email template is enabled, all emails of forwarded traps will use the template.

Tokens used in template	
<b>\$ip</b>	IP address of trap originator
<b>\$oid</b>	Trap OID
<b>\$ts</b>	Timestamp value
<b>\$sp</b>	Value of SNMPv1 trap's specific field
<b>\$vb.all</b>	All variable bindings
<b>\$vb.n</b>	The <i>n</i> th variable binding. For example, \$vb.1 is the first variable binding, \$vb.2 is the second one.

## ■ SNMPv3 Trap Receiver Tab

This table stores the properties of SNMPv3 trap senders. You can add or delete items from this table.

## Command Line Options

Command line tools are located at \$INSTALL\_DIR\bin directory.

- ◆ MIB browser can be launched from the command line with the following options:

<b>browser.bat -h (or – help, -?)</b>	Print usage
<b>-h &lt;h&gt;</b>	Specify the host name or IP address of SNMP agent.
<b>-p &lt;p&gt;</b>	Specify the port number of the SNMP agent. Default value is 161.

<b>-v &lt;1 2 3&gt;</b>	Specify the SNMP version number. Possible values are 1, 2, and 3.
<b>-c &lt;c&gt;</b>	Specify the SNMP community name. Default value is public.
<b>-o &lt;o&gt;</b>	Specify OID.
<b>-a &lt;a&gt;</b>	Specify the SNMP action. Possible values are (get getnext getsubtree walk gettable).
<b>-f &lt;filename&gt;</b>	Output CSV file name. Used with gettable action.
<b>-s &lt;filename&gt;</b>	Open a saved session on startup.
<b>-w</b>	Open watch tab on startup.

#### ◆ Command Line Graph Tool

*graph.bat* script is used to record an SNMP agent's values to a file, which can be opened by the MIB browser using the "File/Open Graph Data" menu.

Running *graph.bat* without any arguments will print usage and examples.

#### ◆ Command Line SNMP Tools

*snmpget.bat* script is used to issue SNMP GET request.

*snmpgetnext.bat* script is used to issue SNMP GET-NEXT request.

*snmpset.bat* script is used to issue SNMP SET request.

## Keyboard Shortcuts

CTRL-L	Load MIB file
CTRL-F	Find a MIB node.
CTRL-G	Perform SNMP GET operation.
CTRL-N	Perform SNMP GET-NEXT operation.
CTRL-E	Perform Get-Subtree operation.
CTRL-S	Perform SNMP SET operation.
CTRL-W	Perform walk operation.
CTRL-P	Stop current operation.
Enter	If Operations or Go button have focus, pressing “Enter” key will repeat last operation.
CTRL-T	Table view
CTRL-R	Plot graph.
CTRL-D	Add to watches
CTRL-O	Open watches panel
CTRL-I	Open trap receiver panel

## **About different editions**

The free personal edition is intended exclusively for private use on a single workstation. You may copy the complete program package and pass it on to others for private use only. The free personal edition may not be used for commercial or professional purposes.

The professional edition has many more features and can be used for commercial or professional purposes.

The enterprise edition has more powerful trap receiver and monitoring features.

## Features table

Feature	Personal Edition	Professional Edition	Enterprise Edition
Runs on Windows, Mac OS X, Linux and other UNIX platforms	✓	✓	✓
Supports basic SNMP operations	✓	✓	✓
Table view for MIB tables	✓	✓	✓
SNMPv3 USM user management		✓	✓
Trap Receiver	✓	✓	✓
Trap Sender	✓	✓	✓
Supports IPv6	✓	✓	✓
Supports SNMPv1/v2c	✓	✓	✓
Supports loading any standard or private MIB	✓	✓	✓
Maximum number of MIBs loaded	10	No restrictions	No restrictions
Free	✓		
Supports SNMPv3		✓	✓
Watches		✓	✓
Address Group		✓	✓
Network discovery		✓	✓
ICMP Ping tool		✓	✓
ICMP Traceroute tool		✓	✓
Performance graph		✓	✓
